

Green Scrub

abraider, degreaser & haze remover

DESCRIPTION

Green Scrub is a super thick haze removing and degreasing gel that works on all types of screen inks. The unique gel formulation of Green Scrub allows the product to spread easier than most typical pink paste products. This ability to spread and flow permits Green Scrub to more efficiently enter the mesh knuckles with less effort and time. Green Scrub begins to “work” on contact to remove ghost image stains, fabric oils and residues which will interfere with the emulsion coating. The low foaming formulation requires less time to rinse and reduces the chance residual chemical being left on the screen. Using Green Scrub will properly prepare your screen for emulsion coating and help reduce issues such as fish-eyes and pin-holes.

ADVANTAGES

- Non-caustic formula is safe for workers
- Excellent for degreasing & wetting fabrics
- Starts to “work” on contact
- Biodegradable and drain safe
- Ideal for new fabric
- Spreads easily and works faster than pink pastes
- Low foaming for fast and easy rinsing
- Safe on mesh
- Low VOCs (Volatile Organic Compound)
- Great lemon-lime scent

DIRECTIONS

Apply Green Scrub to both sides of the screen. Use a non-abrasive pad or brush to scrub both sides of the screen. Depending on the screen conditions, allow Green Scrub to dwell up to 10 minutes on the screen. Follow with a high pressure rinse starting at the bottom and working from side to side up to the top. A final flood rinse over the entire frame and mesh is recommended to remove any trace of chemicals. Allow screen to dry completely before reusing.

TYPICAL PRODUCT PROPERTIES

Appearance	Thick green gel
Odor	Lemon-Lime
pH	8.5
Specific Gravity	0.97
Weight, per U.S. gallon	8.1 lbs.
Stability	Stable
Rinsability	Excellent
DOT Shipping	Non-hazardous

AVAILABLE PACKAGE SIZES

55 Gallon Drum	#01447-D5505
5 Gallon Pail	#01447-P5005
1 Gallon Pail	#01447-P1005
